

Project Progress Report 2

Using the CSS and Java script I learnt, I enhanced the look and feel of the website. I started by outlining the design and various facets of the HTML structure for the project. used CSS to style the HTML elements, changing the font, color, and layout to create a responsive and aesthetically acceptable design. Media queries were included into the CSS to ensure that the project is responsive and looks great on a variety of devices and screen sizes. The project's visual appeal and engagement were enhanced with the addition of eye-catching effects using CSS animations and transitions. JavaScript was used to give the project dynamic behavior, improving user interactions and improving the overall user experience. Clicks and modifications made by the user were recorded using JavaScript event listeners.
