

Project Progress Report 1

My Contribution:

I have successfully created the admin login page, and also I have learned the importance of implementing security measures, such as salting passwords to protect against unauthorized access. I have implemented error reporting, this is essential to prevent PHP errors from being displayed to end users, improving the user experience. I have implemented error reporting, this is essential to prevent PHP errors from being displayed to end users, improving the user experience. I have also learned how to pass and retrieve values in the query string and display alert messages to users based on specific conditions. In this case, I can display an "Invalid Credentials" message when needed. I have also learned to structure the login page using HTML, creating a visually appealing and user-friendly design. I have added a banner section with a title, breadcrumb navigation, and a login form. I have implemented an HTML form for user input.

I have also figured out what how the user interface will be and all its functionalities. I have also started working on the modules of admin which are add new cars, view cars.

Summary:

We as a team completed coding for the home page, admin login page and started working on user interface and its modules along with admin modules. We also created the database for storing car details, we have also created a table to store new users registration details , there is a table for storing admin details.
